TaxTech - AI-Assisted Withholding Tax Preparation

Hackathon submission guide

TaxTech helps accountants prepare income and sales-tax withholding drafts. Ledger upload and AI review are steps in that workflow. The accountant checks invoice evidence and approves treatment; stored rules calculate the draft. Ask TaxTech helps users navigate the app.

This demo is configured for FY2024-25 (Tax Year 2025), July 2024-June 2025. Tax constants can be modified for any tax year, together with its applicable rules, thresholds, salary bands and effective dates. A developer must update and validate the configuration before enabling another year. Editing admin rates alone does not enable it; the demo has no tax-year switch or simultaneous multi-year schedules.

1. Give judges a separate demonstration account

Use the dedicated accountant account with synthetic records. The March 2025 example is complete, April practice can be reset, and the optional May sample supports an upload demonstration. Keep the owner account separate. Put only the dedicated judge login in Devpost's private judges-and-organizers attachment; never put passwords or API keys in the public story or video.

Open the live app and follow the judge instructions. Use only invented data. Do not reset a shared practice period while a judge is using it.

2. Recreate the English demo under three minutes

An earlier public video exists. Recreate it with the title "TaxTech - AI-Assisted Withholding Tax Preparation" and the configuration explanation above. Aim for 2:40. Show real app captures and model results, synthetic invoices, human decisions, a withholding draft and Ask TaxTech. Disclose edited footage and synthesized narration if used.

Suggested timing: 0:00-0:20 withholding problem; 0:20-0:45 upload; 0:45-1:30 AI and human review; 1:30-2:05 withholding batch and internal PDF; 2:05-2:25 assistant; 2:25-2:40 configuration and limits. Hide credentials, billing and client records.

Upload to YouTube as **Public**. Check the published playback and duration. Update the Devpost video link when the replacement is ready. The existing public video has not been replaced by this documentation update.

Review and finish the entry

3. Complete the saved Devpost draft

On 28 October, Devpost was saved as **DRAFT, 4/5 steps complete**, including the earlier video, screenshots, project links and private judge note. The revised documentation and application copy in this update are local changes; publishing them to GitHub/Vercel and updating the saved Devpost story are separate actions.

Use the revised technical submission copy for the withholding narrative. Keep Best Apps and Agents as the track. Explain runtime NVIDIA Nemotron through Nebius Token Factory, the human approval boundary, actual provider feedback and improvements to the pre-existing application. Do not invent performance results.

Open Devpost final review. Review the story, links, new video and private attachment. The entrant must review eligibility and rules, accept the terms and click Submit project. Saving a draft does not enter the contest. Retain the confirmation.

The previously checked deadline is 30 October 2026 at 10 PM Pakistan time. Recheck the official contest rules for changes before submitting.

4. Keep judge access and usable AI credits

Keep the hosted app, Neon database, judge account and Nebius key available through judging. The previously checked end is 16 December 2026 at 1 AM Pakistan time. Recheck organizer dates. Verify usable credit balance and expiry directly in Nebius; a successful AI request does not prove credits will last.

Scheduled checks and backup jobs are disabled at the owner's request. This guide does not enable checks or start any service. The owner can check availability and credit expiry manually. Do not purchase credits without the owner's authorization.

Scope of the demonstration

Only the reviewed cases in the active FY2024-25 configuration are enabled. Other years can be configured and validated by a developer. Unsupported cases need specialist review. Salary is an estimate module. TaxTech does not verify live ATL status, file returns, make payments or issue official payment instruments.
