# TaxTech - AI-Assisted Withholding Tax Preparation

## Remaining owner and developer actions

This demo is configured for FY2024-25 (Tax Year 2025), July 2024-June 2025. Tax constants can be modified for any tax year, together with its applicable rules, thresholds, salary bands and effective dates. A developer must update and validate the configuration before enabling another year. Editing admin rates alone does not enable it; the demo has no tax-year switch or simultaneous multi-year schedules.

## 1. Publish the revised wording when approved

Local app copy, documentation, PDF guides and the owner handover now use the withholding narrative. These edits have not been committed or deployed. Update the saved Devpost description from the revised technical copy when publishing. Dated audit evidence stays intact with a clarification.

## 2. Recreate and replace the demo video

The earlier video is public at the existing YouTube link. Recreation is the next requested step. Lead with withholding-tax preparation; explain that the demo uses FY2024-25 and constants can be modified for another year with applicable rules, dates and validation. Use English, synthetic data, actual captures and a duration under three minutes. Publish the replacement publicly and change the Devpost video link.

## 3. Review and submit Devpost yourself

The last verified draft was 4/5 complete on 28 October 2026. Open final review, inspect the revised story, links, screenshots, replacement video and private judge note, then accept the rules and submit. A draft is not submitted. The previously checked deadline is 30 October at 10 PM Pakistan time; recheck organizer updates.

## 4. Retain access and credits through judging

Keep the app, database, judge account and AI key active. Verify credit expiry as well as balance. Previously checked judging ends 16 December at 1 AM Pakistan time; recheck the official rules. Scheduled checks and backup jobs remain disabled at your request. No automated availability guarantee is provided.

No client data, passwords or provider keys belong in public materials. AI suggests; a person approves. Unsupported cases remain pending. The app prepares drafts and internal summaries, and does not file or pay tax.
