TaxTech submission guide

Nebius x NVIDIA Global AI Hackathon | Four steps to finish your entry

Submit by: 30 October 2026, 10:00 AM PDT = 10:00 PM Pakistan time.
Keep access working through: 15 December 2026, noon PST = 16 December, 1:00 AM Pakistan time. Recheck the official rules before submitting.

1 / Prepare the judge account

1. Have the developer create a separate TaxTech Judge Demo company and a dedicated login in the hosted app. Use an accountant role with access only to this company, not a global administrator. The existing create-admin setup script creates a superadmin, so it is not suitable unchanged.

2. Use only invented vendors, transactions and identifiers. Load a June 2025 example; keep a ready-to-view draft plus a separate fresh upload period/company so judges can repeat the workflow. Label all vendor-status evidence as synthetic.

3. Test the login in a private browser window. Check upload, AI review, human decisions, draft generation and Ask TaxTech. Keep the sample CSV downloadable from the app. No payment, personal invitation or owner login should be needed.

4. Put the dedicated credentials in the organizer-designated judge/testing instructions. Confirm who can see that field. Never put the owner password or API keys in the public README, video or this guide.

Judge testing instructions to adapt
Open the live app and sign in with the supplied demo credentials. Select TaxTech Judge Demo and June 2025. View the prepared example or upload the sample CSV into the fresh demo workspace. Run AI review; inspect the suggestions and questions; record human approvals or exclusions for every entry. Verify synthetic vendor details, then generate a draft. Open Ask TaxTech and ask: "How do I finish reviewing this ledger?" Drafts are demonstrations, not filed returns.

2 / Record and publish the demo

Use screen recording with an English voice-over. Aim for 2:40, leaving a buffer below three minutes. Show real app activity and hide credentials, billing screens and client data.

Time	What to show
0:00-0:20	The accountant's problem and the synthetic ledger.
0:20-0:45	Upload, map columns and preview the entries.
0:45-1:30	Live AI suggestion, explanation/question, then a human decision.
1:30-2:05	Finish reviews, check vendor evidence and generate a draft.
2:05-2:30	Ask TaxTech a workflow question and follow its guidance.
2:30-2:40	Explain NVIDIA/Nebius usage and current limitations.

Upload to YouTube using your account: Create > Upload video. Set visibility to Public. Add a clear title, English description and the app/repository links. Check the final runtime and play the published link while signed out. Use only media you have permission to publish.

Finish the entry. Keep it usable.

Use the same working links, workflow and claims everywhere.

3 / Complete Devpost

1. Sign in to Devpost, join the hackathon, open My projects and create or edit the TaxTech entry. Choose Best Apps and Agents. Complete every required field in English.

2. Add these links and open each from a signed-out browser:

Live app: taxtech-zeta.vercel.app
Public code: github.com/muhammadabdulrafay63-sudo/taxtech
Video: paste your published YouTube watch link.

3. Describe the problem, intended users, working features and architecture. Explain that NVIDIA Nemotron through Nebius Token Factory interprets unclear ledger descriptions and provides app guidance; people approve decisions and stored rules calculate amounts. Verify the actual deployed model before naming it.

4. Describe the existing baseline separately from work added during the contest. Highlight AI review, recorded human decisions, the contextual assistant and workflow safeguards. Link dated commits that prove the changes. Do not imply the entire app was created during the contest.

5. Write feedback from your own use: one thing that helped, one specific issue, its effect and a suggested improvement. Cover the Nebius/NVIDIA tools actually used. If AI Cloud was not used, say so; do not invent timings, accuracy scores or feedback.

6. Confirm the public repository has an open-source license recognized by GitHub and a usable setup README. Add screenshots and judge instructions, review the entry preview, then submit. Save the submission URL and confirmation; a saved draft is not a submitted entry.

> Accuracy checkpoint: the agreed scope is July 2024-June 2025. Historical rate discrepancies and incomplete salary/rent support were found in the latest audit. Resolve or clearly exclude affected calculations before recording; do not describe TaxTech as perfect, certified or ready for real filing. AI suggestions require human review.

4 / Keep judge access and AI available

1. Keep the app, Neon database, dedicated account and provider key active through judging. Avoid password rotation, paused services or destructive demo resets that could interrupt a judge. Provide enough fresh sample data for repeat attempts.

2. In Nebius Token Factory billing, check both remaining usable credits and their expiry dates. Credits that expire before judging will not cover it. Measure the cost of a complete demo run and budget for repeat use with a buffer; there is no verified fixed minimum balance.

3. Check availability, login and one real AI request regularly, and immediately before judging starts. Watch provider billing and quota alerts. Ensure app request allowances cover judge testing; local fallback help alone does not prove the live AI is working.

4. If credits will run out or expire, arrange valid credits or an approved top-up before that date. Re-test afterward. Keep support contact details in the testing instructions and fix broken links or access promptly.

Final check

Judge login tested / Synthetic data only / Public video under 3:00 / All Devpost fields complete / Submission confirmed / Credits and access cover judging

Sources and scope

Official contest rules (dates, entry requirements, video and judging access), checked 21 October 2026; also the rules supplied by the owner. App-specific steps use the local submission notes and source code. This is a preparation guide: it does not create the judge account, upload the video or submit the entry.
