TaxTech | Final submission steps

Owner handoff - 21 October 2026

Developer portion complete. The dedicated judge account, synthetic March example, resettable April practice, sample upload, public MIT repository and Devpost technical copy are ready. Hosted AI, access controls, production monitoring and a fresh encrypted backup passed verification.

Keep the private judge-access note separate from this guide. Its password is excluded from the public repository and this PDF. No video has been uploaded and no Devpost entry has been submitted by this handoff.

1. Record and publish the demo

Before recording: sign into the dedicated judge account using the private note. Rehearse with April practice, then use **Reset April practice**. Save the optional **May CSV upload** for the recorded take: identical repeat uploads are deliberately blocked.

Time	Show on screen
0:00-0:20	Explain the ledger-to-tax-batch problem and historical TY2025 scope.
0:20-0:45	Upload the May sample CSV and confirm the column mapping.
0:45-1:30	Run live AI review; show an unclear entry and the reviewer decision. Use the invented invoice facts in the judge guide.
1:30-2:05	Generate a batch; show its amounts and internal PDF summary.
2:05-2:30	Ask TaxTech for help with the current step.
2:30-2:40	Explain Nebius Token Factory + NVIDIA Nemotron, and human approval.

Use **English narration** and keep the finished video **under three minutes** (target 2:40). Show actual responses; avoid unsupported accuracy or time-saving claims. Hide passwords, API keys, billing and real client information.

In YouTube Studio choose **Create > Upload videos**, upload the recording and select **Public**. Open the watch link while signed out and check playback, sound and duration. Copy that link for Devpost. Capture a few real app screenshots if the entry asks for them.

Ready resources: Live app | Judge testing instructions | May sample CSV

Submit, then keep access working

2. Complete and submit Devpost

Deadline: 30 October 2026 at 10 AM PDT = **10 PM Pakistan time**. Allow time for upload and form problems.

1. Open your hackathon entry and choose **Best Apps and Agents**. Use the prepared Devpost technical copy for the architecture, Nebius/NVIDIA feedback, improvements and testing evidence. Review the wording before using it.

2. Add the live app, public GitHub repository, public YouTube video and any requested screenshots. Fill in the personal/team, ownership and eligibility details yourself; review the entrant terms.

3. Find the judge-testing/access field and check who can see it. Copy only the **dedicated synthetic judge login** from the private note, together with its instructions. Never include the owner login, provider keys or database credentials.

4. Preview the entry, test every link and sign into the judge account once. Click the final **Submit** control and save the confirmation. A saved draft is not a completed submission.

3. Check credits and retain judge access

Check Nebius Token Factory billing: confirm the usable balance and credit expiry. Live inference passed now, but the balance and expiry were **not verified** because browser access was disabled. If credits expire before judging ends, arrange an extension, valid credits or an owner-approved top-up beforehand.

Judging is **1-15 December 2026**. Keep the account, app, Neon database and Nebius key working through **15 December at noon PST = 16 December at 1 AM Pakistan time**. Avoid rotating the judge password, deleting its company/data or pausing the project during this period.

Budget for repeated judge runs plus a buffer using actual billing usage; there is no verified fixed credit minimum. Daily request limits are not dollar spending caps. Existing monitoring checks service health, judge readiness and AI allowance; its daily AI probe tests current key usability. Act on alerts and recheck credit expiry yourself.

Store the private judge login in your password manager. Production monitoring and backup runs passed on 21 October; a successful check today cannot guarantee future access. The app remains a historical, human-reviewed preparation demo, not official filing or payment software.

Final checklist: public English video under 3 minutes; Devpost submitted and confirmation saved; dedicated judge access included; usable credits and hosted services available through judging.
